Study Methodology

This study, funded by The SCAN Foundation, was conducted by The Associated Press-NORC Center for Public Affairs Research. Data were collected using the Foresight 50+ Consumer Omnibus, a monthly multi-client survey using NORC's probability-based panel designed to be representative of the U.S. household population of adults age 50 and older. The survey was part of a larger study that included questions about other topics not included in this report. During the initial recruitment phase of the panel, randomly selected U.S. households were sampled with a known, non-zero probability of selection from the NORC National Sample Frame or a secondary national address frame, both with over 97% coverage of all U.S. addresses, and then contacted by U.S. mail, email, telephone, or field interviewers (face to face). Households were screened for having at least one adult age 50 and older. The panel provides sample coverage of approximately 97% of the U.S. household population. Those excluded from the sample include people with P.O. Box only addresses, some addresses not listed in the USPS Delivery Sequence File, and some newly constructed dwellings population. Of note for this study, the panel would also exclude adults age 50 and older who live in some institutional types of settings, such as skilled nursing facilities or nursing homes, depending on how addresses are listed for the facility. Staff from NORC at the University of Chicago, The Associated Press, and The SCAN Foundation collaborated on all aspects of the study.

Interviews for this survey were conducted between August 20 and August 23, 2021, with adults age 50 and older representing the 50 states and the District of Columbia. Panel members were randomly drawn from the Foresight 50+ Panel, and 1,015 completed the survey—949 via the web and 66 via telephone. Interviews were conducted in English. Respondents were offered a small monetary incentive (\$3) for completing the survey.

The final stage completion rate is 16.0%, the weighted household panel recruitment rate is 19.1%, and the weighted household panel retention rate is 75%, for a cumulative response rate of 2.3%. The overall margin of sampling error is +/- 4.1 percentage points at the 95% confidence level including the design effect.

Once the sample has been selected and fielded, and all the study data have been collected and made final, a poststratification process is used to adjust for any survey nonresponse as well as any noncoverage or under and oversampling resulting from the study specific sample design. Poststratification variables included age, gender, census division, race/ethnicity, education, and AARP Membership. Weighting variables were obtained from the 2021 Current Population Survey and AARP. The weighted data reflect the U.S. population of adults age 50 and over. Topline data and reports are available at www.longtermcarepoll.org. For more information, email info@apnorc.org.

About The Associated Press-NORC Center for Public Affairs Research

Celebrating its 10th anniversary this year, The AP-NORC Center for Public Affairs Research taps into the power of social science research and the highest-quality journalism to bring key information to people across the nation and throughout the world.

- The Associated Press (AP) is an independent global news organization dedicated to factual reporting. Founded in 1846, AP today remains the most trusted source of fast, accurate, unbiased news in all formats and the essential provider of the technology and services vital to the news business. More than half the world's population sees AP journalism every day.

www.ap.org

- NORC at the University of Chicago is one of the oldest and most respected, objective social science research institutions in the world. www.norc.org

The two organizations have established The AP-NORC Center for Public Affairs Research to conduct, analyze, and distribute social science research in the public interest on newsworthy topics, and to use the power of journalism to tell the stories that research reveals. In its 10 years, The AP-NORC Center has conducted more than 250 studies exploring the critical issues facing the public, covering topics like health care, the economy, COVID-19, trust in media, and more.
