

# Pearson Institute/AP-NORC Poll

Conducted by the Pearson Institute and The Associated Press-NORC Center for Public Affairs Research  
With funding from NORC at the University of Chicago

*Interviews: 09/09-09/13/21*

*1,071 adults*

*Margin of error: +/- 3.9 percentage points at the 95% confidence level among all adults*

*NOTE: All results show percentages among all respondents, unless otherwise labeled.*

**PA1. When it comes to getting information about current events and important issues in the U.S. and around the world, do you think the spread of misinformation is a major problem, a minor problem, or not a problem at all?**

**[HALF SAMPLE ASKED RESPONSE OPTIONS IN REVERSE ORDER]**

### **Study Methodology**

This survey was conducted by the Pearson Institute and The Associated Press-NORC Center for Public Affairs Research with funding from NORC at the University of Chicago. Staff from Pearson Institute and The AP-NORC Center collaborated on all aspects of the study.

Data were collected using the AmeriSpeak Omnibus®, a monthly multi-client survey using NORC's probability-based panel designed to be representative of the U.S. household population. The survey was part of a larger study that included questions about other topics not included in this report. During the initial recruitment phase of the panel, randomly selected U.S. households were sampled with a known, non-zero probability of selection from the NORC National Sample Frame and then contacted by U.S. mail, email, telephone, and field interviewers (face-to-face). The panel provides sample coverage of approximately 97 percent of the U.S. household population. Those excluded from the sample include people with P.O. Box only addresses, some addresses not listed in the USPS Delivery Sequence File, and some newly constructed dwellings.

Interviews for this survey were conducted between September 9 and September 13, 2021, with adults age 18 and over representing the 50 states and the District of Columbia. Panel members were randomly drawn from AmeriSpeak, and 1,071 completed the survey — 986 via the web and 85 via telephone. Interviews were conducted in English. The final stage completion rate is 19.3 percent, the weighted household panel recruitment rate is 19.0 percent, and the weighted household panel retention rate is 75.1 percent, for a cumulative response rate of 2.8 percent. The overall margin of sampling error is +/- 3.9 percentage points at the 95 percent confidence level, including the design effect. The margin of sampling error may be higher for subgroups.

Once the sample has been selected and fielded, and all the study data have been collected and made final, a poststratification process is used to adjust for any survey nonresponse as well as any noncoverage or under- and oversampling resulting from the study specific sample design. Poststratification variables included age, gender, census division, race/ethnicity, and education. Weighting variables were obtained from the 2020 Current Population Survey. The weighted data reflect the U.S. population of adults age 18 and over.

### **About the Associated Press-NORC Center for Public Affairs Research**

The AP-NORC Center for Public Affairs Research taps into the power of social science research and the highest-quality journalism to bring key information to people across the nation and throughout the world.

- The Associated Press (AP) is the world's essential news organization, bringing fast, unbiased news to all media platforms and formats.
- NORC at the University of Chicago is one of the oldest and most respected, independent research institutions in the world.

The two organizations have established The AP-NORC Center for Public Affairs Research to conduct, analyze, and distribute social science research in the public interest on newsworthy topics, and to use the power of journalism to tell the stories that research reveals.
