# Support for Greater Government Role in Health Care for Older Adults 

Conducted by The Associated Press-NORC Center for Public Affairs Research<br>Funded by The SCAN Foundation

Interview dates: July 28 - August 1, 2022
Nationally representative sample of 1,505 adults age 18 and older, conducted using the AmeriSpeak ${ }^{\circledR}$
Panel, the probability-based panel of NORC at the University of Chicago
Margin of error: +/- 3.6 percentage points at the $95 \%$ confidence level

NOTE: All results show percentages among all respondents, unless otherwise labeled.

LTC1. Generally speaking, how well do you think each of the following is handled in the United States?
[GRID ITEMS RANDOMIZED; HALF SAMPLE ASKED RESPONSE OPTIONS IN REVERSE ORDER]

DISPLAY. Some people need ongoing living assistance as they get older. This assistance can be help with things like keeping house, cooking, bathing, getting dressed, getting around, paying bills, remembering to take medicine, or just having someone check in to see that everything is okay. This help can happen at your own home, in a family member's home, in a nursing home, or in a senior community. And, it can be provided by a family member, a friend, a volunteer, or a health care professional.

LTC6. Now, thinking about who should be responsible for paying for the costs of ongoing living assistance...

How much responsibility should each of the following have for paying for the costs of ongoing living assistance?

## Study Methodology

This study, funded by The SCAN Foundation, was conducted by The Associated Press-NORC Center for Public Affairs Research. Staff from NORC at the University of Chicago, The Associated Press, and The SCAN Foundation collaborated on all aspects of the study.

Data were collected using the AmeriSpeak Omnibus ${ }^{\circledR}$, a monthly multi-client survey using NORC's probability-based panel designed to be representative of the U.S. household population. The survey was part of a larger study that included questions about other topics not included in this report. During the initial recruitment phase of the panel, randomly selected U.S. households were sampled with a known, non-zero probability of selection from the NORC National Sample Frame or a secondary national address frame, both with over $97 \%$ coverage of all U.S. addresses, and then contacted by U.S. mail, email, telephone, or field interviewers (face to face). The panel provides sample coverage of approximately $97 \%$ of the U.S. household population. Those excluded from the sample include people with P.O. Box only addresses, some addresses not listed in the USPS Delivery Sequence File, and some newly constructed dwellings population. Of note for this study, the panel would also exclude adults who live in some institutional types of settings, such as skilled nursing facilities or nursing homes, depending on how addresses are listed for the facility.

Interviews for this survey were conducted between July 28 and August 1, 2022, with adults age 18 and older representing the 50 states and the District of Columbia. Panel members were randomly drawn from AmeriSpeak, and 1,505 completed the survey- 1,434 via the web and 71 via telephone. Panel members were invited by email or by phone from an NORC telephone interviewer. Interviews were conducted in English and Spanish. Respondents were offered a small monetary incentive (\$3) for completing the survey.

The final stage completion rate is $17.7 \%$, the weighted household panel recruitment rate is $19.5 \%$, and the weighted household panel retention rate is $77.0 \%$, for a cumulative response rate of $2.7 \%$. The overall margin of sampling error is +/- 3.6 percentage points at the $95 \%$ confidence level including the design effect. The margin of sampling error may be higher for subgroups.

In addition, African American and Hispanic respondents were sampled at a higher rate than their proportion of the population for reasons of analysis. The overall margin of sampling error for the 350 completed interviews with African American respondents is $+/-7.5$ percentage points at the 95 percent confidence level including the design effect. The overall margin of sampling error for the 375 completed interviews with Hispanic respondents is +/- 8.0 percentage points at the 95 percent confidence level including the design effect.

Sampling error is only one of many potential sources of error and there may be other unmeasured error in this or any other survey.

Quality assurance checks were conducted to ensure data quality. In total, 71 interviews were removed for nonresponse to at least $50 \%$ of the questions asked of them, for completing the survey in less than one-third the median interview time for the full sample, or for straight-lining all grid questions asked of them. These interviews were excluded from the data file prior to weighting.

Once the sample has been selected and fielded, and all the study data have been collected and made final, a poststratification process is used to adjust for any survey nonresponse as well as any noncoverage or under and oversampling resulting from the study specific sample design. Poststratification
variables included age, gender, census division, race/ethnicity, and education. Weighting variables were obtained from the 2022 Current Population Survey. The weighted data reflect the U.S. population of adults age 18 and over.

## About The SCAN Foundation

The SCAN Foundation is an independent public charity dedicated to creating a society where older adults can access health and supportive services of their choosing to meet their needs. Our mission is to advance a coordinated and easily navigated system of high-quality services for older adults that preserve dignity and independence. For more information, visit www.TheSCANFoundation.org.

## About The Associated Press-NORC Center for Public Affairs Research

Celebrating its $10^{\text {th }}$ anniversary this year, The AP-NORC Center for Public Affairs Research taps into the power of social science research and the highest-quality journalism to bring key information to people across the nation and throughout the world.

- The Associated Press (AP) is an independent global news organization dedicated to factual reporting. Founded in 1846, AP today remains the most trusted source of fast, accurate, unbiased news in all formats and the essential provider of the technology and services vital to the news business. More than half the world's population sees AP journalism every day. www.ap.org
- NORC at the University of Chicago is one of the oldest objective and non-partisan research institutions in the world. www.norc.org

The two organizations have established The AP-NORC Center for Public Affairs Research to conduct, analyze, and distribute social science research in the public interest on newsworthy topics, and to use the power of journalism to tell the stories that research reveals. In its 10 years, The AP-NORC Center has conducted more than 250 studies exploring the critical issues facing the public, covering topics like health care, the economy, COVID-19, trust in media, and more.
