Study Methodology

This survey was conducted by The Associated Press-NORC Center for Public Affairs Research, with funding from The Energy Policy Institute at the University of Chicago (EPIC). Staff from NORC at the University of Chicago, The Associated Press, and EPIC collaborated on all aspects of the study.

Data were collected using both probability and non-probability sample sources. Interviews for this survey were conducted between September 2-18, 2025, with adults age 18 and over representing the 50 states and the District of Columbia.

The probability sample source is AmeriSpeak®, NORC's probability-based panel designed to be representative of the U.S. household population. During the initial recruitment phase of the panel, randomly selected U.S. households were sampled with a known, non-zero probability of selection from the NORC National Sample Frame and then contacted by U.S. mail, email, telephone, and field interviewers (face-to-face). The panel provides sample coverage of approximately 97 percent of the U.S. household population. Those excluded from the sample include people with P.O. Box only addresses, some addresses not listed in the USPS Delivery Sequence File, and some newly constructed dwellings.

Panel members were randomly drawn from AmeriSpeak, and 1,097 completed the survey – 1,063 via the web and 34 via telephone. Interviews were conducted in English. The final stage completion rate is 22.8 percent, the weighted household panel response rate is 26.3 percent, and the weighted household panel retention rate is 78.0 percent, for a cumulative response rate of 4.7 percent.

Dynata provided 2,057 non-probability interviews with adults age 18 and over. The Dynata sample was derived based on quotas related to age, race and ethnicity, gender, and education. Interviews were conducted in English and via the web only. For panel recruitment, Dynata uses invitations of all types including email invitations, phone alerts, banners, and messaging on panel community sites to include people with a diversity of motivations to take part in research. Because non-probability panels do not start with a frame where there is known probability of selection, standard measures of sampling error and response rates cannot be calculated.

Quality assurance checks were conducted to ensure data quality. In total, 68 interviews were removed for nonresponse to at least 50% of the questions asked of them, for completing the survey in less than one-third the median interview time for the full sample, or for straight-lining all grid questions asked of them. These interviews were excluded from the data file prior to weighting.

In order to incorporate the nonprobability sample, NORC used TrueNorth calibration, an innovative hybrid calibration approach developed at NORC in order to explicitly account for potential bias associated with the nonprobability sample. TrueNorth uses a tree-based non-parametric supervised learning algorithm to classify respondents based on their survey responses and apply a ratio

adjustment to adjust the weights for the nonprobability sample to bring weighted distributions of the nonprobability sample in line with the population distribution for characteristics correlated with the survey variables. Such calibration adjustments help to reduce potential bias, yielding more accurate population estimates. A raking process is used to adjust for any survey nonresponse as well as any noncoverage or under and oversampling in both probability and non-probability samples resulting from the study specific sample design. Raking variables for the probability sample included age, gender, census region, race/ethnicity, education, and 2024 vote choice. Raking variables for the nonprobability samples included age, gender, census region, race/ethnicity, and education. The non-probability sample was also adjusted based on the party identification distribution of the probability sample. Population control totals for the raking variables were obtained from the 2025 Current Population Survey and the final results for 2024 presidential vote turnout and vote choice. The weighted data reflect the U.S. population of people age 18 and over.

The overall margin of error for the combined sample is +/- 2.4 percentage points at the 95 percent confidence level, including the design effect. The margin of sampling error may be higher for subgroups. Sampling error is only one of many potential sources of error and there may be other unmeasured error in this or any other survey.

Complete questions and results are available at apnorc.org.

Additional information on the TrueNorth approach can be found here: https://truenorth.norc.org/.

About the Associated Press-NORC Center for Public Affairs Research

The AP-NORC Center for Public Affairs Research taps into the power of social science research and the highest-quality journalism to bring key information to people across the nation and throughout the world.

- The Associated Press (AP) is an independent global news organization dedicated to factual reporting. Founded in 1846, AP today remains the most trusted source of fast, accurate, unbiased news in all formats and the essential provider of the technology and services vital to the news business. More than half the world's population sees AP journalism every day. www.ap.org

- NORC at the University of Chicago is one of the oldest objective and nonpartisan research institutions in the world. www.norc.org

The two organizations have established The AP-NORC Center for Public Affairs Research to conduct, analyze, and distribute social science research in the public interest on newsworthy topics, and to use the power of journalism to tell the stories that research reveals. Learn more at apnorc.org.

About EPIC

The Energy Policy Institute at the University of Chicago (EPIC) is confronting the global energy challenge by working to ensure that energy markets provide access to reliable, affordable energy, while limiting environmental and social damages. We do this using a unique interdisciplinary approach that translates robust, data-driven research into real-world impacts through strategic outreach and training for the next generation of global energy leaders. epic.uchicago.edu @UChiEnergy
